# Title 32 Special Districts

Our team understands the importance of creating metropolitan districts that can be used to provide urban level services to properties to allow for their timely development. We provide services that extend beyond simple statutory compliance for the formation of the district to include a specialized understanding of the requirements of jurisdictions for the formation of districts. We have developed relationships over the years with financial consultants and engineers to provide a comprehensive package for the creation of districts uniquely crafted to fit specific development projects.

We also represent existing districts in providing general counsel advice as well as specialized project research and delivery of development and utility options. We have sought disconnection as well as inclusion into existing districts for properties depending on the utility needs of each project.
